# YasXTouch

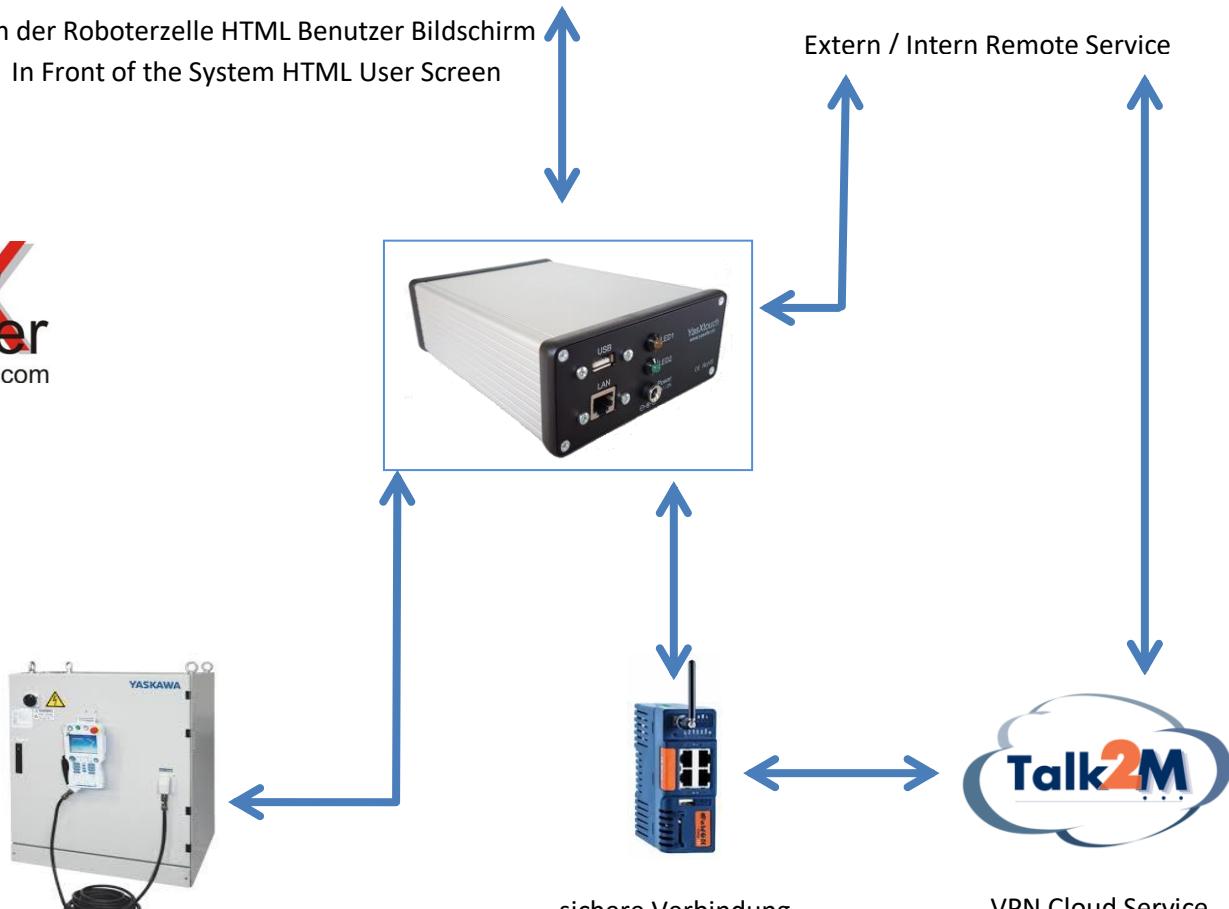

YasXfer Remote Maintenance  
CustomLog Plugin

## 1. Funktionsweise

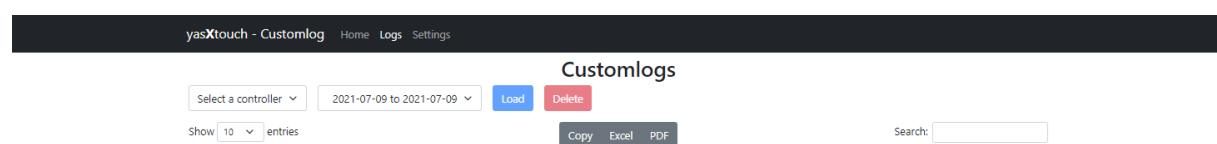

Über die Plugin Funktion können Anwenderspezifische Zusatzfunktionen installiert werden. In diesem Fall die Möglichkeit Daten vom Roboter Controller zu archivieren.

## 2. Voraussetzung

- YasXTouch Unit komplett konfiguriert mit eingetragenen Controllern
- Web Browser
- Ein USB Stick mit dem Namen YASXEXTERN muss in dem dauerhaft USB Slot stecken.
- Das Plugin muss zusätzlich als Update nachgeladen werden. Ab Softwarestand 1.36 möglich.

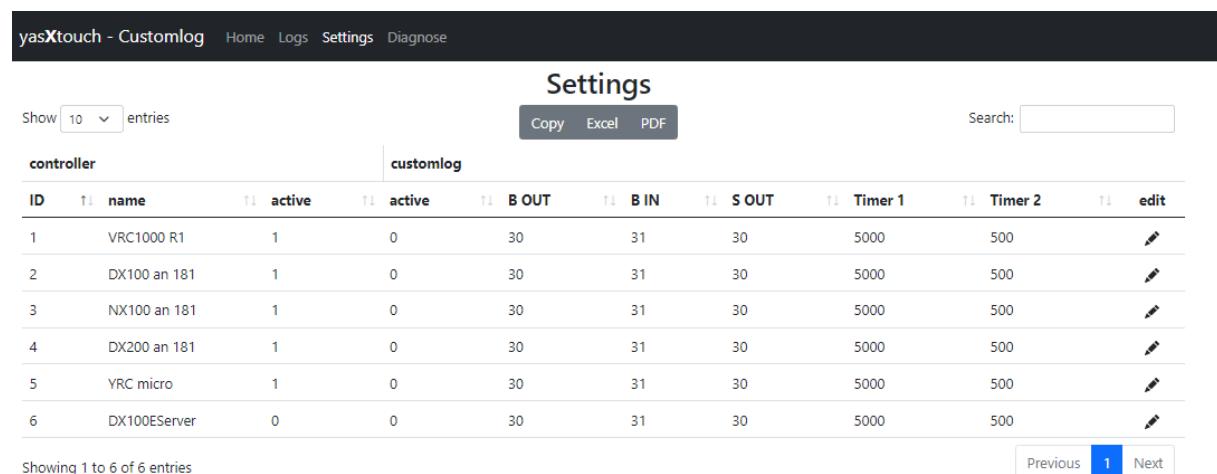

## 3. Customlog Startseite

Aufruf des Plugins erfolgt über den neuen Eintrag in der Taskleiste,  Customlog

### 3.1 Settings Übersicht

Im Menüpunkt Settings wird eine Übersicht angezeigt, über Edit können diese geändert werden.

| ID | name         | active | active | B OUT | B IN | S OUT | Timer 1 | Timer 2 | edit  |
|----|--------------|--------|--------|-------|------|-------|---------|---------|---|

**Close** **Save changes**

Wichtig ist das Password des Serveradmins unten einzugeben, um einen Missbrauch zu vermeiden. Standard 99999999  
Nach dem Ändern der Settings ist ein Reboot erforderlich.

## 4. Ablaufbeschreibung

Zuerst wird in die S-OUT String Variable ein Text geschrieben.

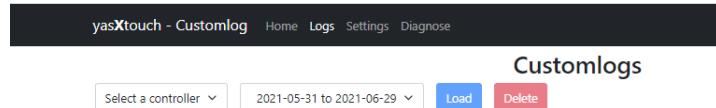

Durch das Ändern der B-OUT Variable von 0 auf 1 wird innerhalb von 5s dieser Text auf das XasXtouch geladen. Danach wird als Return Wert die B-IN auf 1 gesetzt. Wenn nun eine weitere Zeichenfolge geschickt werden soll muss zuerst die S-OUT Variable beschrieben werden. Danach den B-OUT Wert inkrementieren. Innerhalb 500ms wird dieser Text auf das YasXTouch geladen. Als Return Wert gibt die B-IN den gleichen Wert der B-OUT zurück. Wenn die Zeile beendet, und damit abgespeichert, werden soll muss die B-OUT Variable auf den Wert 0 gesetzt werden.

# YasXTouch

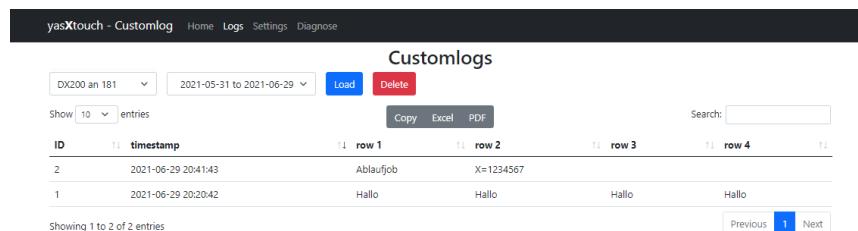

YasXfer Remote Maintenance  
CustomLog Plugin

## 5. Logs

Unter dem Button auf der Taskleiste Logs können die gespeicherten Zeilen angeschaut, heruntergeladen und gelöscht werden

Zuerst den Controller auswählen, anschließend den Zeitraum. Dann mit Load betätigen

| ID | timestamp           | row 1     | row 2     | row 3 | row 4 |
|----|---------------------|-----------|-----------|-------|-------|
| 2  | 2021-06-29 20:41:43 | Ablaufjob | X=1234567 |       |       |
| 1  | 2021-06-29 20:20:42 | Hallo     | Hallo     | Hallo | Hallo |

Die ausgewählten Daten können nun entweder per Copy in die Zwischenablage, als Excel oder als PDF weiterverarbeitet werden.

Wenn der Zeitraum ausgewählt wird, dann können alle Zeilen mit Delete gelöscht werden. Zur Sicherheit wird wieder das Serveradmin Password abgefragt.

# YasXTouch

YasXfer Remote Maintenance  
CustomLog Plugin

## 6. Beispiel Job

Dieser Beispieljob soll die Vorgehensweise veranschaulichen:  
D000 wird auf 123456789 gesetzt. Das ist der eingelesene Messwert.

```

NOP
*AUTO
SET B030 0
WAIT B031=0
SET S030 "Measurement R1"
SET B030 1
'BEWEGUNG
TIMER T=2.00
WAIT B031=1
FOR I000 START= 1 TO 6
  VAL2STR S030 D034
  INC B030
  WAIT B031=B030
NEXT I000
SET B030 0
TIMER T=3.00
WAIT B031=0
JUMP *AUTO
END
  
```

Die Zeile, die abgespeichert wird sieht dann so aus:

| Customlogs |                     |                |           |           |           |           |           |           |  |  |  |

## 21. Functionality

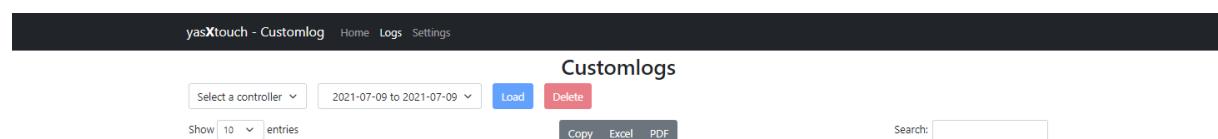

User-specific additional functions can be installed via the plug-in function. In this case the possibility to archive data from the robot controller.

## 22. Actual Requirements

- YasXTouch Unit completely configured with registered controllers
- Web Browser
- A USB stick with the name YASXEXTERN must be permanent inserted in the USB slot.
- The plug-in must also be reloaded as an update. Possible to use from software version 1.36.

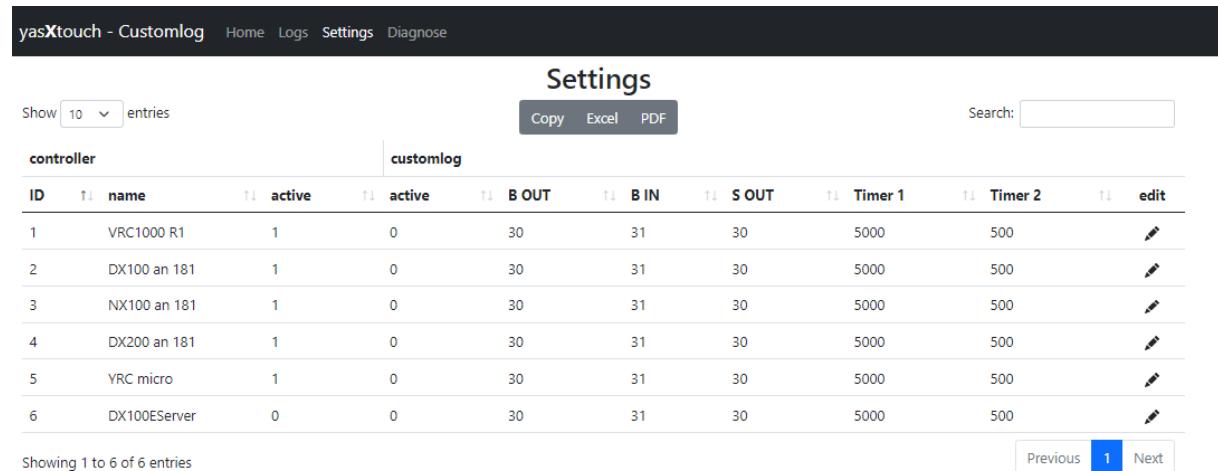

## 23. Customlog home page

The plug-in is called via the new entry in the task bar,  , Customlog

### 23.1 Settings Overview

An overview is displayed in the Settings menu, these can be changed by using the Edit sign.

| ID | name         | active | active | B OUT | B IN | S OUT | Timer 1 | Timer 2 | edit |
|----|--------------|--------|--------|-------|------|-------|---------|---------|------|

| S-OUT      | 30<br>S-Variable to send the content.                       |
| Timer 1    | 5000<br>Sleep-timer in milliseconds while sequence is 0.    |
| Timer 2    | 500<br>Awake-timer in milliseconds while sequence is not 0. |
| Password   | Serveradmin password.                                       |

**Close** **Save changes**

It is important to enter the server admin's password below to avoid misuse. Standard 99999999

A reboot is required after changing values from the settings.

## 4. Process description

First a text is written into the S-OUT string variable.

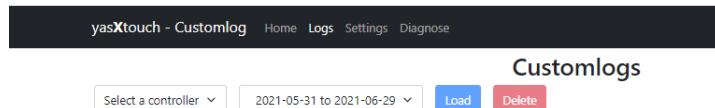

By changing the B-OUT variable from 0 to 1, this text will be loaded onto the XasXtouch within 5 seconds. Then the B-IN is set to 1 as the return value. If another character string has to be sent, the S-OUT variable must be written with the new text. Then the B-OUT value must be incremented. Then this text will be loaded onto the YasXtouch within 500ms. The B-IN returns the same value as the B-OUT as a return value. If the line shut be ended and saved, the B-OUT variable must be set to the value 0.

# YasXTouch

YasXfer Remote Maintenance  
CustomLog Plugin

## 5. Logs

The saved lines can be viewed, downloaded and deleted using the Logs buttons on the taskbar

First select the controller, then the period. After this press the Load Button

| Customlogs |                     |           |           |       |       |
|------------|---------------------|-----------|-----------|-------|-------|
| ID         | timestamp           | row 1     | row 2     | row 3 | row 4 |
| 2          | 2021-05-29 20:41:43 | Ablaufjob | X=1234567 |       |       |
| 1          | 2021-05-29 20:20:42 | Hallo     | Hallo     | Hallo | Hallo |

The selected data can now either be copied to the clipboard, processed as Excel or as PDF.

If the period is selected, then all lines can be deleted with Delete. Serveradmin password is again requested for security reason.

## 6. Sample Job

This sample job is intended to illustrate the procedure:

D000 is set to 123456789 as a sample value. This will represent a Measure Value.

```

NOP
*AUTO
SET S030 "Measurement R1"
SET B030 1
'BEWEGUNG
TIMER T=2.00
WAIT B031=1
FOR I000 START= 1 TO 6
  VAL2STR S030 D034
  INC B030
  WAIT B031=B030
NEXT I000
SET B030 0
TIMER T=3.00
WAIT B031=0
JUMP *AUTO
END
  
```

The stored line after completing with B031=0 looks like this:

| Customlogs |                     |                |           |           |           |           |           |           |           |           |           |
